### **New real wood veneers for residential internal doors from Lebo**

Lebo GmbH is presenting a completely new veneer range at BAU 2023 in Munich.

Twelve surface finishes, available with vertical and horizontal grain as well as in vertical / horizontal combinations. The Listello model, which redefines horizontal grain, is a true highlight: narrow veneer strips in a lined look create an unusual appearance – available in Walnut, White Oak and Smoked Oak.

To round off the appearance of high-quality woods and special veneer configurations, all veneer doors are finished with a matte lacquer coating. This ensures that the doors have a consistent natural look and feel.

Lebo's new veneer range focuses not only on the natural look, but also on sustainability: only PEFC-certified raw materials are used, and the entire plant is powered by green electricity.
